### **Research:**

#### **Brief summary of research over last five years**

Research over the last eight years has concentrated on the following topics:

- The syntactic projection of function words in the non-clausal system; i.e. nominal, adjectival and prepositional constructions.
- Displacement phenomena, with an emphasis on so-called predicate displacement operations, freezing phenomena, and subextraction phenomena.
- The morpho-syntactic encoding of grammatical micro-variation in the Dutch nominal and adjectival domain.
- The syntax of semi-lexical and silent nouns.
- Language and affect: the syntax of cursing; interjections; emphatic/affective, morphosyntactic markers.
- The syntax of adverbs / adverbial expressions.
- The syntax of Dutch. I was the coordinator of the research group Syntax of Dutch, which is part of the larger project *Taalportaal. The Linguistics of Dutch and Frisian Online* (see <http://www.taalportaal.org/>). Taalportaal is an interactive knowledge base about of the grammars (phonology, morphology, syntax) of Dutch and Frisian.

- *DiDDD (2005-2009; NWO-funded)*. [results/research-projects/i/18/718.html](https://www.nwo.nl/en/research-and-results/research-projects/i/18/718.html)  
<https://www.nwo.nl/en/research-and->

The data in DiDDD (Diversity in Dutch DP Design) were collected between 2005 and 2009 with oral and written interviews in about 200 locations in the Dutch language area, with a methodology highly parallel to DynaSAND. The data involve translations of and judgements on test sentences. The DiDDD data cover the morphosyntactic variation within nominal groups, in particular possessives, partitives, noun ellipsis, the demonstrative system, the numeral modification system, what-for constructions, quantitative er, adjectival inflection, negation and exclamatives. DiDDD is part of MIMORE (<http://www.meertens.knaw.nl/mimore/>)

(Research group: Norbert Corver, Marjo van Koppen, Huib Kranendonk, Jan-Pieter Kunst)

- *DADDI (2012-2017; NWO-FWO-funded)*

The data in DADDI (Database of Dutch Dialect Idioms) were collected between 2012 and 2017, as part of the project The Syntax of Idioms (Utrecht university & Leuven university). The database contains well over 7,000 idioms collected from dictionaries, grammars, and idioticons of 13 dialects spoken in the Netherlands and Flanders. A second part of the data

comes from structured interviews with native speakers of Dutch dialects. Over 13,000 individual judgments of idiom constructions in dialects have been collected and are now stored in the database. (<http://language.link.let.uu.nl/idioms/index-nl.php>) (research group: Norbert Corver, Jeroen van Craenenbroeck, Eefje Boef, Kristel Doreleijers, William Harwood, Marko Hladnik, Sterre Leufkens, Tanja Temmerman).
